ABSTRACT.—This bibliography contains 395 entries, all the scientific publications of Warren H. Wagner, Jr. The bibliography is based on a list maintained by Prof. Wagner, with additional comments and entries by Dr. Florence S. Wagner and Dr. Richard Rabeler. It includes abstracts, ephemera, reports, and reviews. The bibliography is in rough chronological order of publication. Exact publication dates were found for most journal articles. However, month or estimated dates were used for other publications, especially books, which usually are not datable within a year. All the entries are contained in a searchable database now maintained by Florence S. Wagner. The database categorizes the publications according to their subject matter and includes the more or less exact publication dates that are the basis for the chronological list.
